

PCTEL Simplifies In-Building Wireless Network Deployment With Automated WiFi and Equipment Room Testing

August 19, 2020

BLOOMINGDALE, Ill.--(BUSINESS WIRE)--Aug. 19, 2020-- PCTEL, Inc. (Nasdaq: PCTI), a leading global provider of wireless technology, announced enhancements to its in-building network testing solutions, including new WiFi and equipment room testing features. Users of PCTEL's [SeeHawk® Touch software](#) can now test WiFi, cellular, and critical communications networks simultaneously, quickly perform essential equipment room tests, and automatically incorporate the results into reports for building owners, managers, and local authorities.

"These new SeeHawk Touch features improve in-building testing efficiency and expand the benefits of our public safety network testing solution. Our grid-based testing system now also verifies that buildings and campuses have the WiFi coverage they need, without the additional time investment of conducting separate tests or compiling reports," said Rishi Bharadwaj, PCTEL's Chief Operating Officer. "Integrators will be able to save even more time by automating equipment room tests that are essential to the commissioning process," added Bharadwaj.

SeeHawk Touch software collects data across multiple frequencies and technologies from a PCTEL® [scanning receiver](#), automatically incorporating results in printable pass/fail reports that were developed to meet rigorous new requirements for in-building public safety radio coverage.

PCTEL's [public safety network testing solution](#) kits include SeeHawk Touch, an [IBflex® scanning receiver](#) and accessories. The new WiFi feature is available as an add-on option, while equipment room testing is included with all public safety kits.

[Meet with PCTEL online August 24-27 at IWCE Virtual](#) to learn more about SeeHawk Touch software, along with PCTEL's full portfolio of test and measurement, antenna, and industrial IoT solutions.

About PCTEL

PCTEL is a leading global provider of wireless technology, including purpose-built [Industrial IoT devices](#), [antenna systems](#), and [test and measurement solutions](#).
