

## **PCTEL Enhances In-Building Critical Communications Testing with Cloud-Based Reporting and Automation**

July 7, 2021

BLOOMINGDALE, Ill.--(BUSINESS WIRE)--Jul. 7, 2021-- PCTEL, Inc. (Nasdaq: PCTI), a leading global provider of wireless technology, announced the launch of SeeHawk™ Central, a cloud-based reporting and automation platform for in-building critical communications network testing.

To ensure reliable indoor communications for first responders, local jurisdictions increasingly require building owners to verify compliance with strict radio coverage requirements using a grid-based testing method. The [PCTEL® public safety network testing solution](#), which combines SeeHawk® Touch software with an IBflex® scanning receiver, has transformed the way this testing and reporting is conducted by replacing manual processes with an automated system that saves time and money. With [SeeHawk Central](#), users of the testing solution will be able to securely upload data to the cloud, automate workflows, expand testing operations, and offer value-added reports to customers through a centralized, secure online platform.

In addition to meeting the needs of a rapidly expanding user base for PCTEL's testing solution, SeeHawk Central also makes enforcement easier for fire marshals and other Authorities Having Jurisdiction (AHJs), who can receive instant access to standardized reports for buildings across their jurisdictions from a single platform.

"SeeHawk Central further expands our application software offering through a next generation cloud-based platform, making it easier for our customers to conduct tests and generate the reports required to meet strict local building occupancy requirements. This will enable users of PCTEL testing systems to grow their businesses by delivering more value for their customers," said Rishi Bharadwaj, PCTEL's Chief Operating Officer. "In addition, our platform will also allow building owners and local jurisdictions to easily view reports and track annual re-testing requirements," added Bharadwaj.

SeeHawk Central supports grid-based testing of public safety, private radio, WiFi, and cellular networks. It features an easy-to-use map-based interface that provides instant access to historical data, along with the ability to instantly generate and securely share reports with multiple stakeholders. With the ability to automate workflows remotely and automatically upload data from the field, customers can standardize testing procedures and save significant time.

SeeHawk Central will be available mid-Q3 2021 and will be sold as a subscription service that is scalable to support growth.
